**Dear PPH,**

I am excited to be applying for the position of full stack developer. Please accept this letter and the attached resume as my interest in this position.

In my previous role, I was responsible for developing web and mobile applications and implementing new IT technologies in order to help clients and the company reach strategic objectives.

My experience is an excellent fit for the list of requirements in this job:

- Experience designing RESTful APIs and implementing RESTful Web services
- Work with our vendors to maintain the .com website and serve as the technical lead for system implementation and software configuration
- Proficiency in at least one front-end JavaScript framework (React, Angular, Ember)
- Interest in working with our stack (NodeJS, React, Postgres, AWS)
- Would feel comfortable and confident building a new full-stack application from scratch
- This is used as a tool to improve the user interface of \_\_\_\_website
- HTML/CSS is also needed to help with development of the website
- At the end of the day, data is king for MSG

**Thank you for your time and consideration.**

Sincerely,

Shaymaa Hafez Ebrahiem
